1 AFT File Specifications

Originators that upload AFT files to Central 1 must ensure that their files comply with Central 1's AFT file specifications. These specifications are based on CPA Standard 005, Standards for the Exchange of Financial Data on AFT Files, with some modifications.

2 AFT File Structure

Ensure that the AFT file is structured as follows:

 Header Record – The file contains 1 header record ("A" Record). This record consists of 1 segment containing the "A" record. Leave other segments blank. See

- Table 1.
- Detail Record(s) The file can contain any number of detail records. Each detail record consists of 7 segments, as follows:
 - Segment 0 Consists of data elements 01 to 03 of the detail record, which are common to all detail transactions.
 - Segments 1 to 6 Each segment consists of data elements 04 to 21 of the detail record.

Individual transactions are made up of segments 0 and 1, 0 and 2, and so on. A block is made up of segments 0 to 6. The block contains information on 6 individual transactions.

Enter a carriage return line feed at the end of your last segment. See **Table 2**.

Trailer Record – the file contains 1 trailer record ("Z" Record). This record consists of 1 segment containing the "Z" record. Leave other segments blank. See Table 3.

3 Format of Records and Segments

- If 1 record, leave unused segments blank (spaces).
- If 1 segment is blank, all subsequent segments in that record must be blank.
- The presence of 1 detail record containing unused segments does not preclude the occurrence of subsequent detail records containing data.

4 Format of Data Elements

- Data elements are a fixed length.
- Numeric data elements must be right-justified and zero filled. Alphanumeric data elements do not require justification but must be space filled.
- Enter zeros for numeric fields or spaces for alphanumeric fields to leave a data element blank.
